Overall Assessment Letter for the LG MG140a

FCC id: UBIMG140a

I have assessed the above referenced submission for the MG140a and found it to be compliant.

The product is a dual band GPRS phone which supports 850 and 1900 MHz frequencies

The following points were noted and resolved during the evaluation.

1. Application

The application form did not provide accurate information required for the grant which reflected the test results recorded in the reports. This information was subsequently revised.

2. Label

There was no photograph or diagram showing the placement of the label on the product. A photograph was provided which showed the label inside the battery compartment.

3. Confidentiality Letter

The confidentiality letter was not provided on official LG company letterhead paper and had not been dated. An amended letter was received correcting this.

4. General

The product was tested for both Head and Body SAR.

The highest reported Head SAR for the product was 0.282 W/kg.

The highest reported Body SAR for the product with 1.5 cm separation was 0.409 W/kg.

I have reviewed the SAR using the FCC supplied Checklist.

I underwent the FCC SAR evaluation training at BABT in May 2006.

Yours sincerely
